ULTRASOUND SERVICES PROVIDED DURING YOUR PREGNANCY

Our practice routinely performs up to 2 sonograms during your pregnancy:

The first sonogram is done between 8 and 10 weeks. At this time, we will

1. Confirm your due date
2. View the baby's heartbeat

The second sonogram is done in your 2nd trimester at approximately 20-22 weeks. At this time, we will

1. Assess the baby's growth rate and well-being
2. Assess the baby's basic anatomy
3. Assess your cervix using **transvaginal** ultrasound

Additional sonograms may be necessary during your pregnancy if there are medical concerns.

If you wish to have any sonogram recorded, you may bring a DVD or flash drive and we will record a portion of the exam for you.
